

# 7 Steps of Field work

## 1. Selecting your location

Park near my apartment.

## 2. Scan your location

## 3. Climate information

I was able to wear jeans, t-shirt, and a light jacket.

It was warm and sunny, no precipitation

Here's info from my Weather app when I went.

## 4. Topography

It's pretty flat. Slight baby hills  
Slight declines

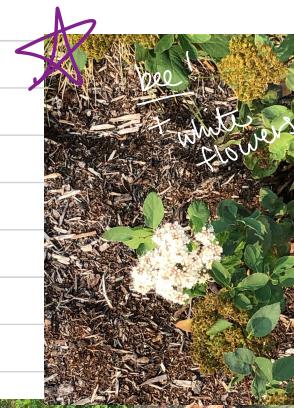

## 5. Biodiversity.

Saw different types of plants. I see roses and different flowers.

Lots of different types of trees

I saw purple flowers, pink roses, small white flowers in clusters.

## 6. Ecology

In the picture w/ you can see a bee collecting pollen from this flower

## 7. Conservation Biology.

There is some human impact. You can see litter in the photo with trash and cigarette butts.

You can also see that some of the bushes and plants are human planted as they are way too evenly spaced.
